roblox math game: Making Games for Impact Kurt Squire, 2021-10-26 Designing games for learning: case studies show how to incorporate impact goals, build a team, and work with experts to create an effective game. Digital games for learning are now commonplace, used in settings that range from K-12 education to advanced medical training. In this book, Kurt Squire examines the ways that games make an impact on learning, investigating how designers and developers incorporate authentic social impact goals, build a team, and work with experts in order to make games that are effective and marketable. Because there is no one design process for making games for impact—specific processes arise in response to local needs and conditions—Squire presents a series of case studies that range from a small, playable game created by a few programmers and an artist to a multimillion-dollar project with funders, outside experts, and external constraints. These cases, drawn from the Games + Learning + Society Center at the University of Wisconsin-Madison, show designers tackling such key issues as choosing platforms, using data analytics to guide development, and designing for new markets. Although not a how-to guide, the book offers developers, researchers, and students real-world lessons in greenlighting a project, scaling up design teams, game-based assessment, and more. The final chapter examines the commercial development of an impact game in detail, describing the creation of an astronomy game, At Play in the Cosmos, that ships with an introductory college textbook.

roblox math game: Unschooling To University Judy L. Arnall, 2018-09-21 School is one option for education; homeschooling is the second, and unschooling is the third. Many parents are frustrated by the school system, perhaps because of bullying, crowded classrooms, and outdated, dull, online courses. Disengaged learners that have no say in their coerced curriculum tend to act

out, tune out, or drop out. Education must change and unschooling is the fastest-growing alternative method of learning. Two decades ago, students registered with their local school based on their house address. Now, with the internet, students are borderless. Learning can occur anywhere, anytime, anyway and from anyone-including self-taught. Self-directing their education, unschoolers learn through: - Play - Projects - Reading - Volunteering - Video games - Sports - Mentorship - Travel - Life This book explores the path of 30 unschooled children who self-directed all or part of their education and were accepted by universities, colleges, and other postsecondary schools. Most have already graduated. What children need most are close relationships-parents, teachers, siblings, relatives, coaches, and mentors within a wider community, not just within an institutional school. Educational content is everywhere. Caring relationships are not. Families that embrace unschooling, do not have to choose between a quality education and a relaxed, connected family lifestyle. They can have both.
