world history resources: The Well-Trained Mind Susan Wise Bauer, Jessie Wise, 2024-04-02 The classic handbook on home schooling updated for a new generation of parents and students. Is your child getting lost in the system, becoming bored, losing his or her natural eagerness to learn? If so, it may be time to take charge of your child's education by doing it yourself The Well-Trained Mind will instruct you, step by step, on how to give your child an academically rigorous, comprehensive education from preschool through high school—one that will train him or her to read, to think, to understand, to be well-rounded and curious about learning. Veteran home educator Susan Wise Bauer outlines the classical pattern of education called the trivium, which organizes learning around the maturing capacity of the child's mind and comprises three stages: the elementary school "grammar stage," when the building blocks of information are absorbed through memorization and rules; the middle school "logic stage," in which the student begins to think more analytically; and the high-school "rhetoric stage," where the student learns to write and speak with force and originality. Using this theory as your model, you'll be able to instruct your child—whether

full-time or as a supplement to classroom education—in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. A new optional Resource Recommendations Portal provides subscribers with curated lists of the best curricula for every grade level and learning style. Thousands of parents have already used the methods described in *The Well-Trained Mind* to create a truly superior education for children in their care. You do have control over what and how your child learns. *The Well-Trained Mind* will give you the tools you'll need to teach your child with confidence and success.

world history resources: Agriculture, Resource Exploitation, and Environmental Change

Helen Wheatley, 2021-03-24 This volume examines the ecological consequences of European expansion as a result of land use and resource exploitation. These environmental transformations could be as dramatic as the last Ice Age, but scholars have only begun to take full measure of the changes. The articles presented here provide a map of some of the more promising directions of historical research. Major themes include biological exchange, agriculture, extraction of forest and animal resources, interactions between indigenous and European methods of exploitation, and European approaches to regulation and conservation. A useful corrective to the frontier image of Europeans conquering the wilderness, this volume provides a rich picture of the diversity of European interests and the sometimes unexpected consequences of their approaches to the land.

world history resources: Resource Extraction, Space and Resilience Juha Kotilainen,

2020-10-29 While much of the current research on the extractive industries and their socio-environmental impacts is region specific, *Resource Extraction, Space and Resilience: International Perspectives* critically explores the current state of the extractive industries sector from a uniquely global perspective. The book introduces a more dynamic idea of sustainability in evaluating mineral extraction and its impacts, and provides a spatialized understanding of the evolution of the extractive industries to help visualise the interlinkages across space, regions and scales. Professor Kotilainen responds to these theoretical challenges by analysing the potential for resilience of mining activities from multiple perspectives across scales, exploring why it is only possible to achieve temporary balance and stability for the whole resource extraction system. Taking a global perspective, the book explores the interlinkages of the industry, investigates the similarities and differences in how the industry operates and examines the social and environmental impacts it has. By providing an explicitly theoretically informed analysis of the state of the extractive industries, this text will appeal to a wide range of scholars with an interdisciplinary interest in the extractive industries and natural resource management, including human geographers and social scientists with a focus on the relations of humans and societies with their physical environments.

world history resources: Energy Resource Conflict Adrah N. Parafiniuk, Zachary A. Smith,

2025-01-23 Delve into the history of energy resource conflicts, their present status, and the potential effects of today's energy production decisions on the future of humanity. This book examines international and sometimes intranational conflicts over energy resources, including ancient empires, 20th-century wars over oil, and the explosive growth of renewable energy. The volume begins with a series of chapters tracing the evolution and future implications of energy production and clashes over these vital resources. Next, readers will discover a collection of essays addressing fascinating yet sometimes contentious facets of the subject, including the current limits of renewable energy sources and the role nuclear power should play. A collection of 50 encyclopedic entries round out the book, providing readers with concise explanations of key concepts and terms. Energy resource conflicts have shaped the world we live in. After humans settled across the planet, growing empires began to compete for resources. First, they competed for wood, then steel and coal. The ability to mine these resources and turn them into trains, ships, and weapons decided which countries would dominate the world. Oil became the most important international resource by the turn of the 20th century and has remained so until the present day. But, as the authors argue, humans have the technology to transition from fossil fuels to renewable energy for the vast majority of their energy needs, despite corporate fossil fuel interests. Using advanced statistics on the use

and growth of all major energy sources, this book is an excellent source of information on the predicted growth of various forms of energy as well as the inevitable-yet not necessarily peaceful-transition toward renewable and carbon-free energy sources.

world history resources: Curriculum Renewal for Islamic Education Nadeem A. Memon, Mariam Alhashmi, Mohamad Abdalla, 2021-05-10 This book demonstrates why and how it is necessary to redesign Islamic Education curriculum in the K-12 sector globally. From Western public schools that integrate Muslim perspectives to be culturally responsive, to public and private schools in Muslim minority and majority contexts that teach Islamic studies as a core subject or teach from an Islamic perspective, the volume highlights the unique global and sociocultural contexts that support the disparate trajectories of Islamic Education curricula. Divided into three distinct parts, the text discusses current Islamic education curricula and considers new areas for inclusion as part of a general renewal effort that includes developing curricula from an Islamic worldview, and the current aspirations of Islamic education globally. By providing insights on key concepts related to teaching Islam, case studies of curriculum achievements and pitfalls, and suggested processes and pillars for curriculum development, contributors present possibilities for researchers and educators to think about teaching Islam differently. This text will benefit researchers, doctoral students, and academics in the fields of secondary education, Islamic education, and curriculum studies. Those interested in religious education as well as the sociology and theory of religion more broadly will also enjoy this volume.
