Many of the differences in outlook, priorities and even values can be traced back to the 1054 schism between the churches of Rome and Constantinople which created Europe's most durable fault-line. Travelling from Mount Athos to Istanbul and unravelling the tangled history, Victoria Clark demonstrates a rare sympathy with Eastern Orthodox Europe. forgotten hill fall tutorial: One-on-One Tutoring by Humans and Computers Martha Evens, Joel Michael, 2006-08-15 One-on-One Tutoring by Humans and Computers articulates the CIRCSIM-Tutor project, an attempt to develop a computer tutor that generates a natural language dialogue with a student. Editors Martha Evens and Joel Michael present the educational context within which the project was launched, as well as research into tutoring, the process of implementation of CIRCSIM-Tutor, and the results of using CIRCSIM-Tutor in the classroom. The domain of this project is cardiovascular physiology, specifically targeting first-year medical students, though the idea is applicable to the development of intelligent tutoring systems across populations, disciplines, and domains. This 5 year-long project was motivated by the belief that students need assistance in building appropriate mental models of complex physiological phenomena, as well as practice in expressing these ideas in their own words to fully develop those models, and experience in problem-solving to use those models effectively. The book outlines directions for future research, and includes distinct features such as: *detailed studies of human one-on-one tutoring; *learning

outcomes resulting from use of the tutor; *natural language input parsed and translated into logical form; and *natural language output generated using the LFG paradigm. This volume will appeal to educators who want to improve human tutoring or use computer tutors in the classroom, and it will interest computer scientists who want to build those computer tutors, as well as anyone who believes that language is central to teaching and learning.

forgotten hill fall tutorial: Encyclopedia of Earth Myths Richard Leviton, 2005-10-14
Discover what secrets myths from twenty-one different cultures from around the world reveal about our planet in this A to Z guide. Richard Leviton has become the pre-eminent authority on sacred sites and visionary geography. Through books such as *Signs on the Earth*, *The Emerald Modem*, and *The Galaxy on Earth*, he has explored both the personal and universal aspects of our connection to the planet. Now he shows in *Encyclopedia of Earth Myths* how many of the oldest and most evocative of the world's myths contain a secret about the Earth. They tell something vital about its make-up and history and our long-standing human relation to it. *Encyclopedia of Earth Myths* offers a unique blueprint for understanding world mythology. Carl Jung and Joseph Campbell tutored us in the psychological relevance of myths and the universality of their themes. Now Richard Leviton shows us how they reveal hidden clues about the Earth's spiritual landscape. Using clairvoyance and scholarship, Leviton examines 153 mythic topics in A-Z fashion drawn from twenty-one cultures to tease out their information about Earth's secret landscape. Each entry shows how something considered merely mythic—dragons, giants, the Minotaur, Holy Grail, Fountain of Youth, Golden Apples—actually decodes and illuminates the planet's esoteric make-up. Whether it's African, Tibetan, Native American, Hindu, Peruvian, Egyptian, Greek, or one of fourteen other cultures, myths of many cultures all point to the planet. It's as if clues about the Earth's visionary geography have been scattered in all cultures, awaiting our retrieval and decoding. *Encyclopedia of Earth Myths* is also a practical tutorial for a new subject: our Earth. But this is virtually a new planet we're being introduced to here. The result is an essential reference for anyone interested in world mythology who wants to look beyond the cloak of mythic symbolism and see the world anew.
