the political process updates: *Democratic Processes and Financial Markets* William Bernhard, David Leblang, 2006-07-24 The authors examine the conditions under which democratic events, including elections, cabinet formations, and government dissolutions, affect asset markets. Where these events have less predictable outcomes, market returns are depressed and volatility increases. In contrast, where market actors can forecast the result, returns do not exhibit any unusual behavior. Further, political expectations condition how markets respond to the political process. When news causes market actors to update their political beliefs, market actors reallocate their portfolios, and overall market behavior changes. To measure political information, Professors Bernhard and Leblang employ sophisticated models of the political process. They draw on a variety of models of market behavior, including the efficient markets hypothesis, capital asset pricing model, and arbitrage pricing theory, to trace the impact of political events on currency, stock, and bond markets. The analysis will appeal to academics, graduate students, and advanced undergraduates across political science, economics, and finance.

the political process updates: *Political Risk Management for the Global Supply Chain* Ralph Kliem, 2021-08-05 The global business environment has never been so complex, making supply chains more fragile than ever. A stable business environment seems like a distant dream in today's global marketplace; instability, not stability, has become the norm. Anti-globalization and nationalization, coupled with populist movements and transnational terrorism, just to name a few targeting global supply chains, now pose significant challenges and risks when doing business across the globe. To address such issues, *Political Risk Management for the Global Supply Chain*: Provides an overview of basic political terminology and political risk management Presents the basic processes of political risk management Examines the current and future impacts of political events on global supply chains By putting aside the passions that politics can raise, the book aims to objectively look at political risk management. Topics covered include: Identifying different categories of political risk Understanding the relationship of political risk management, enterprise risk management, supply chain, project management, change management, and business continuity Laying the groundwork for efficient and effective political risk management Evaluating the effectiveness of responses The book begins with an overview on why political risk management is an important yet overlooked topic and the corresponding consequences if it is ignored or overlooked by enterprises and their global supply chains. Next, it provides systemic and systematic perspectives on political risk management and explains why the topic is more important than ever. Most important, it provides a framework that enterprises, regardless of nationality, can use to develop and deploy to manage political risks. The book concludes by discussing the full spectrum of developing, deploying, testing, and maintaining processes to conduct political risk management.

Christian Henning, Ousmane Badiane, Eva Krampe, 2017-10-05 This book is open access under a CC BY 4.0 license. The book examines the methodological challenges in analyzing the effectiveness of development policies. It presents a selection of tools and methodologies that can help tackle the complexities of which policies work best and why, and how they can be implemented effectively given the political and economic framework conditions of a country. The contributions in this book offer a continuation of the ongoing evidence-based debate on the role of agriculture and participatory policy processes in reducing poverty. They develop and apply quantitative political economy approaches by integrating quantitative models of political decision-making into existing economic modeling tools, allowing a more comprehensive growth-poverty analysis. The book addresses not only scholars who use quantitative policy modeling and evaluation techniques in their empirical or theoretical research, but also technical experts, including policy makers and analysts from stakeholder organizations, involved in formulating and implementing policies to reduce poverty and to increase economic and social well-being in African countries.
