Understanding Wall Titans

The Wall Titans are colossal humanoid creatures that serve as the foundation of the Walls protecting humanity from Titans in the "Attack on Titan" universe. These Titans are gigantic, towering over 50 meters tall, and are made of the same materials as the walls themselves. They are dormant until activated by specific triggers, making them key components of the defensive structure against the Titan threat.

Origins of Wall Titans

The origins of the Wall Titans are deeply rooted in the lore of "Attack on Titan." They are believed to be former Eldians who were transformed into Titans through the power of the Founding Titan. This transformation is tied to the complex history of the Eldian people and their oppression by Marley. The fact that these Titans are encased within the walls symbolizes the tragic history of the Eldians and their struggle for survival.

Abilities and Characteristics

Wall Titans possess several unique abilities that set them apart from regular Titans. They are not only massive but also exhibit a level of intelligence and coordination that regular Titans lack. Their primary role is to serve as a defense mechanism, and they can be activated by the Founding Titan's will. Additionally, they are capable of regenerating, just like other Titans, which further enhances their role as guardians.

The Role of Sunlight in Attack on Titan

Sunlight plays a crucial role in the world of "Attack on Titan," particularly when it comes to the nature of Titans. Generally, exposure to sunlight has significant implications for Titans, affecting their abilities and behaviors. Understanding the relationship between sunlight and Titans is essential to fully comprehend what happens when sunlight touches a Wall Titan.

General Effects of Sunlight on Titans

In the series, sunlight is often depicted as a natural weakness for Titans. Unlike humans, Titans are not harmed by sunlight; however, their regenerative abilities are affected. Sunlight interacts with the biological composition of Titans, leading to different outcomes based on their type and state. Here are some key points regarding sunlight's effects:

- Sunlight does not harm Titans physically, but it does influence their behavior.
- Most Titans become more aggressive and unpredictable under direct sunlight.
- Certain types of Titans, particularly those with unique abilities, may have altered responses to sunlight.

Sunlight and the Wall Titans

Wall Titans, being a unique class of Titans, have specific interactions with sunlight. Their massive size and dormant state make them different from regular Titans. Understanding how sunlight affects them requires a closer look at their characteristics and the mechanisms behind their existence.

What Happens When Sunlight Touches a Wall Titan?

When sunlight touches a Wall Titan, several reactions can occur, primarily influenced by their state

and the structure of the walls themselves. The interaction between sunlight and Wall Titans can lead to various outcomes, which are crucial to the narrative of "Attack on Titan."

Activation of Wall Titans

One of the most significant effects of sunlight on Wall Titans is the potential activation of their dormant powers. When exposed to sunlight, Wall Titans may awaken, leading to catastrophic consequences for the world. This activation can be triggered by specific events, such as the presence of the Founding Titan or a direct command.

Potential Vulnerabilities

While sunlight does not physically harm Wall Titans, their exposure could reveal vulnerabilities in their structure. Over time, prolonged exposure may lead to the degradation of the walls themselves, potentially compromising their integrity. This degradation could provide an opportunity for Titans to breach the walls, endangering humanity.

Consequences of Sunlight Exposure

The consequences of sunlight exposure on Wall Titans can be profound, impacting both the Titans and the human population. These consequences range from immediate reactions to long-term implications for the world of "Attack on Titan."

Immediate Reactions

Upon exposure to sunlight, Wall Titans may experience immediate reactions such as:

- Awakening from their dormant state.
- Increased aggression or restlessness.
- Potentially responding to the Founding Titan's commands.

Long-term Implications

The long-term implications of sunlight exposure can be severe. If Wall Titans are activated, they could lead to:

- Devastation of the surrounding area.
- Release of other Titans trapped within the walls.
- Triggering a chain reaction that threatens the safety of humanity.

Fan Theories and Speculations

The intricate nature of "Attack on Titan" has led to many fan theories regarding the relationship between sunlight and Wall Titans. These theories often explore the deeper meanings and implications of the story's events.

Theories on Sunlight Activation

One popular theory suggests that the presence of sunlight is a critical factor in the awakening of Wall Titans. Fans speculate that the Founding Titan has a unique connection to sunlight, and the exposure may act as a catalyst for activating dormant Titans. This theory raises questions about the true nature of the Founding Titan's powers and their connection to the Walls.

Symbolic Interpretations

Another interpretation delves into the symbolism of sunlight. In many narratives, sunlight is a symbol of hope and revelation. The awakening of Wall Titans could represent the unveiling of hidden truths about the Eldians and their history. This symbolic reading adds depth to the overall narrative and encourages discussions about the themes of freedom and oppression.

Conclusion

Understanding what happens if sunlight touches the Wall Titan opens up a complex discussion about the nature of Titans, the history of the Eldians, and the overarching themes in "Attack on Titan." The interaction between sunlight and Wall Titans serves as a pivotal point in the series, highlighting both immediate dangers and long-term consequences for humanity.
