titan manuals: Innovation, Internationalization and Entrepreneurship Renata Korsakienė, Hasan Dinçer, Serhat Yüksel, 2021-08-17 Over the past years, businesses have had to tackle the issues caused by numerous forces from political, technological and societal environment. The changes in the global market and increasing uncertainty require us to focus on disruptive innovations and to investigate this phenomenon from different perspectives. The benefits of

innovations are related to lower costs, improved efficiency, reduced risk, and better response to the customers' needs due to new products, services or processes. On the other hand, new business models expose various risks, such as cyber risks, operational risks, regulatory risks, and others. Therefore, we believe that the entrepreneurial behavior and global mindset of decision-makers significantly contribute to the development of innovations, which benefit by closing the prevailing gap between developed and developing countries. Thus, this Special Issue contributes to closing the research gap in the literature by providing a platform for a scientific debate on innovation, internationalization and entrepreneurship, which would facilitate improving the resilience of businesses to future disruptions.

titan manuals: *Total Consciousness* Mihaly Nemeth, 2015-04-07 As predicted by the Mayans calendar there was a period ending and a new one emerging. The first real evidence was when the magnetic Poles began to move on March 18th, 2018. Triggering shifts in the continental tectonic plates causing volcanoes, earthquakes, and accelerating climate change. The ice caps melted, causing major flooding to coastal populations. Drought and desserts appeared where there were none before. Pollution combined with high atmospheric volcanic ash changed our sky by blocking out some of the sunrays. The rays that got through were kept in our atmosphere slowly raising global temperatures, eventually melting all glaciers and the ice caps. The rains were an acidic cocktail; most of the crops and vegetation could not cope. Then the viruses came, affecting at first, the planets birds, then huffed animals, then the rest, only a few species survived. What followed was devastation in the form of two pandemics, SCARS4 and H9N8, wiping out more than 60% of the world's population in the first flu season. Then came the next round these had no names, there wasn't time, fewer than 100 Million people survived worldwide. Like Intelligent Design, the idea of the Invisible Hand stubbornly persists in the face of overwhelming evidence - James Kenneth Galbraith

titan manuals: **Deconstructing Dr. Strangelove** Sean M. Maloney, 2020-07-01 King of the Cold War crisis film, Dr. Strangelove became a cultural touchstone from the moment of its release in 1964. The duck-and-cover generation saw it as a satire on nuclear issues and Cold War thinking. Subsequent generations, removed from the film's historical moment, came to view it as a quasi-documentary about an unfathomable secret world. Sean M. Maloney uses Dr. Strangelove and other genre classics like Fail Safe and The Bedford Incident to investigate a curious pop cultural contradiction. Nuclear crisis films repeatedly portrayed the failures of the Cold War's deterrent system. Yet the system worked. What does this inconsistency tell us about the genre? What does it tell us about the deterrent system, for that matter? Blending film analysis with Cold War history, Maloney looks at how the celluloid crises stack up against reality—or at least as much of reality as we can reconstruct from these films with confidence. The result is a daring intellectual foray that casts new light on Dr. Strangelove, one of the Cold War era's defining films.
