goodman manuals: The business of birth control Claire L. Jones, 2020-09-15 The business of

birth control is the first book-length study to examine contraceptives as commodities in Britain before the pill. Drawing on new archives and neglected promotional and commercial material, the book demonstrates how hundreds of companies transformed condoms and rubber and chemical pessaries into consumer goods that became widely available via discreet mail order catalogues, newspapers, birth control clinics, chemists' shops and vending machines in an era when older and more reserved ways of thinking about sex jostled uncomfortably with modern and more open attitudes. The book outlines the impact of contraceptive commodification on consumers, but also demonstrates how closely the contraceptive industry was intertwined with the medical profession and the birth control movement, who sought authority in birth control knowledge at a time when sexual knowledge and who had access to it was contested.

goodman manuals: Procedural and declarative information in software manuals Nicole Ummelen, 2022-05-20 People who use software manuals want to get something done. Procedural information directly supports this goal, but the use of declarative information in manuals has often been under discussion. Current research gives rise to the expectation that manual users tend to skip declarative information most of the time. Also, no effects of declarative information in software manuals have yet been found. In this study, information use and information effects in software manuals are investigated in three experiments, thereby taking different user types, different task types and different information arrangements into account. A new technique was applied: the click&read method. This technique enables the software user to use the manual and carry out software tasks at the same time while information selection and times are recorded automatically in logfiles. For the first time, quantitative data are presented about the amounts of procedural and declarative information that were selected and the times that were spent using these information types. Although procedural information is selected more often and used longer, declarative information appears to be a substantial part of the information selection. Moreover, the results show that using declarative information positively affects performance on future tasks, performance on reasoning tasks and factual knowledge.

goodman manuals: A Bronze Age Landscape in the Russian Steppes David W. Anthony, Dorcas R. Brown, Aleksandr A. Khokhlov, Pavel F. Kuznetsov, Oleg D. Mochalov, 2016-12-31 The first English-language monograph that describes seasonal and permanent Late Bronze Age settlements in the Russian steppes, this is the final report of the Samara Valley Project, a US-Russian archaeological investigation conducted between 1995 and 2002. It explores the changing organization and subsistence resources of pastoral steppe economies from the Eneolithic (4500 BC) through the Late Bronze Age (1900-1200 BC) across a steppe-and-river valley landscape in the middle Volga region, with particular attention to the role of agriculture during the unusual episode of sedentary, settled pastoralism that spread across the Eurasian steppes with the Srubnaya and Andronovo cultures (1900-1200 BC). Three astonishing discoveries were made by the SVP archaeologists: agriculture played no role in the LBA diet across the region, a surprise given the settled residential pattern; a unique winter ritual was practiced at Krasnosamarskoe involving dog and wolf sacrifices, possibly related to male initiation ceremonies; and overlapping spheres of obligation, cooperation, and affiliation operated at different scales to integrate groups defined by politics, economics, and ritual behaviors.
