rainbird controller manuals: Nursery Manual for Native Plants R. Kasten Dumroese, Tara Luna, Thomas D. Landis, 2009 In 2001, the Forest Service, U.S. Department of Agriculture (USDA), through its Virtual Center for Reforestation, Nurseries, and Genetics Resources (RNGR), invited Native Americans from across the United States to attend the Western Forest and Conservation Nursery Association annual meeting. About 25 tribal members, representing 20 tribes, attended the meeting at Fort Lewis College in Durango, Colorado. The following year, a similar meeting was held in Olympia, Washington, and tribal members initiated a Tribal Nursery Council and requested that RNGR facilitate the organization. During 2003, RNGR requested information from 560 tribes across the United States, seeking specific information on tribes' needs for native plants, facilities, training, and so on. Results from the responding 77 tribes were incorporated into the Tribal Nursery Needs Assessment. Based on the results of that questionnaire, and input from tribal members attending the 2003 Intertribal Nursery Council meeting in Coeur d'Alene, Idaho, it was agreed that a nursery handbook was needed. That fall, planning began for writing the manual, loosely based on Agriculture Handbook 674, The Container Tree Nursery Manual, but with special attention to the uniqueness of Native American cultures.

rainbird controller manuals: *A Buddhist Ritual Manual on Agriculture* Gergely Hidas, 2019-09-02 This volume is the first in-depth study of a recently discovered Sanskrit dharani spell text from around the 5th century CE surviving in two palm-leaf and three paper manuscript compendia from Nepal. This rare Buddhist scripture focuses on the ritual practice of thaumaturgic weather control for successful agriculture through overpowering mythical Nagas. Traditionally, these serpentine beings are held responsible for the amount of rainfall. The six chapters of the Vajratundasamayakalparaja present the vidyadhara spell-master as a ritualist who uses mandalas, mudras and other techniques to gain mastery over the Nagas and thus control the rains. By subjugating the Nagas, favourable weather and good crops are guaranteed. This links this incantation tradition to economic power and the securing of worldly support for the Buddhist community.
