forest river owners manuals free download: Best Practice Guidelines for the Surveys and Monitoring of Great Ape Populations , 2008 From the website: The IUCN/SSC Primate Specialist Group is publishing new guidelines for surveys and monitoring of great ape populations.

These guidelines address a need which has existed since great ape studies began -- the challenge of collecting consistently high-quality data for comparison between a wide variety of sites, and often across many years. This need is driven less by academic interest than by the urgent demands of field-based conservation. The maelstrom of threats which now endanger all the great apes must be addressed by immediate action on every scale: initiatives at individual sites, strategies on the regional and national level, and species-wide action plans and international accords. All of these efforts must be founded on accurate field data -- and to fully understand the impact of specific threats, and to measure if conservation programs are succeeding, it is essential to have baseline density estimates and sustained monitoring of great ape populations. The newest publication in the Best Practice series outlines current approaches to these issues, offering guidance and perspective on choices that must be made by wildlife biologists, site managers, government agencies and the conservation community at large. This report provides an overview of the variety of survey methodologies that have been developed, as well as a decision tree to help select the approach that is best for a particular site or situation, depending on available resources. As a continuation of this report, a series of modules will be made available online, which will present detailed information on survey design, field techniques, analytical approaches, and practical issues such as logistics, finance and standardized reporting. These new IUCN guidelines will help researchers to standardize their data collection and, just as importantly, will allow for improved comparisons between datasets. This will complement the A.P.E.S. database (<http://apes.eva.mpg.de>), which is intended to serve as a repository for survey data on great apes, and to analyze trends in their populations. These survey and monitoring guidelines, combined with resources available via A.P.E.S., are important steps towards a comprehensive understanding of the conservation status of great apes, at both the population and species level. .

forest river owners manuals free download: [The Transition Handbook](#) Rob Hopkins, 2008-02-25 Move from feeling anxious about the oil crisis to developing a positive visions and taking traction action to create a more self-reliant existence with this ground-breaking book. We live in an oil-dependent world, and have become reliant in a very short space of time, using vast reserves of oil in the process – and without planning for when the supply is not so plentiful. Most of us avoid thinking about what happens when the oil runs out (or becomes prohibitively expensive), but the reality may not be as bad as we think. The Transition Handbook shows how the inevitable and profound changes ahead could have a positive effect. Written by permaculture expert Rob Hopkins, he discusses the possibility of a rebirth of local communities, which will generate their own fuel, food and housing. These will encourage the development of local currencies, to keep money in the local area, and unleash a local 'skilling-up', so that people have more control over their lives. The growth in interest in the Transition model continues to be exponential. There are now more than 35 formal Transition Initiatives in the UK, including towns, cities, islands, villages and peninsulas, with more joining as the idea takes off. With little proactivity at government level, communities are taking matters into their own hands and acting locally. If your community has not yet become a Transition Initiative, this upbeat guide, filled with beautiful black and white photographs, offers you the tools to get started. The Transition Handbook is the perfect manual to guide communities, as they begin this 'energy descent' journey.
