online free repair manuals: Subverting Consumerism Robert Crocker, Keri Chiveralls, 2018-07-24 There is now a widespread interest in reuse in many domains, from opera houses built over old warehouses, to vintage clothes and everyday goods incorporating repurposed materials or parts. Despite its ubiquity, this extensive creative work is typically seen in narrowly environmental terms, as a means of reducing carbon, resource use or waste. However, as this volume shows, reuse also has aesthetic and cultural dimensions and a rich social currency, invoked to consciously subvert the accelerated consumer culture responsible for our unfolding environmental crisis. In three parts, the essays in this book consider reuse in terms of values, aesthetics and meaning, its application in contemporary urban and spatial settings, and the revival of social practices involving a more conscious recourse to reuse and repair. These are bookended by the editors' essays: the first, on the significant relationship between reuse and technological and social acceleration evident in the surrounding consumer society; and the last, on the multiple forms of reuse deployed in a contemporary alternative building practice, and their contributions to presenting alternative ways of living in the world. Challenging dominant understandings of 'waste' and 'consumption', Subverting Consumerism shows how reuse has become a means for many to creatively engage with the past, and to discover a continuity and sense of place eroded by the accelerative regimes of contemporary consumerism. Becoming a means of resistance, and offering a range of aesthetic, social and economic possibilities, reuse can be found to subvert and challenge the obsessive quest for the new found in contemporary consumerism.

online free repair manuals: Power Metal Vince Beiser, 2024-11-19 The powerful ways the metals we need to fuel technology and energy are spawning environmental havoc, political upheaval, and rising violence — and how we can do better. An Australian millionaire's plan to mine the ocean floor. Nigerian garbage pickers risking their lives to salvage e-waste. A Bill Gates-backed entrepreneur harnessing AI to find metals in the Arctic. These people and millions more are part of the intensifying competition to find and extract the minerals essential for two crucial technologies: the internet and renewable energy. In *Power Metal*, Vince Beiser explores the Achilles' heel of "green power" and digital technology — that manufacturing computers, cell phones, electric cars, and other technologies demand skyrocketing amounts of lithium, copper, cobalt, and other materials. Around the world, businesses and governments are scrambling for new places and new ways to get those metals, at enormous cost to people and the planet. Beiser crisscrossed the world to talk to the people involved and report on the damage this race is inflicting, the ways it could get worse, and how we can minimize the damage. *Power Metal* is a compelling glimpse into this disturbing yet potentially promising new world.

online free repair manuals: Wasteland Oliver Franklin-Wallis, 2023-07-18 NAMED A BEST BOOK OF THE YEAR 2023 BY THE NEW YORKER, THE GUARDIAN, and KIRKUS REVIEWS An award-winning investigative journalist takes a deep dive into the global waste crisis, exposing the hidden world that enables our modern economy—and finds out the dirty truth behind a simple

question: what really happens to what we throw away? In *Wasteland*, journalist Oliver Franklin-Wallis takes us on a shocking journey inside the waste industry—the secretive multi-billion dollar world that underpins the modern economy, quietly profiting from what we leave behind. In India, he meets the waste-pickers on the front line of the plastic crisis. In the UK, he journeys down sewers to confront our oldest—and newest—waste crisis, and comes face-to-face with nuclear waste. In Ghana, he follows the after-life of our technology and explores the global export network that results in goodwill donations clogging African landfills. From an incinerator to an Oklahoma ghost-town, Franklin-Wallis travels in search of the people and companies that really handle waste—and on the way, meets the innovators and campaigners pushing for a cleaner and less wasteful future. With this mesmerizing, thought-provoking, and occasionally terrifying investigation, Oliver Franklin-Wallis tells a new story of humanity based on what we leave behind, and along the way, he shares a blueprint for building a healthier, more sustainable world—before we're all buried in trash.

online free repair manuals: Reassembling Rubbish Josh Lepawsky, 2018-04-13 An examination of the global trade and traffic in discarded electronics that reframes the question of the “right” thing to do with e-waste. The prevailing storyline about the problem of electronic waste frames e-waste as generated by consumers in developed countries and dumped on people and places in developing countries. In *Reassembling Rubbish*, Josh Lepawsky offers a different view. In an innovative analysis of the global trade and traffic in discarded electronics, Lepawsky reframes the question of the “right” thing to do with e-waste, mapping the complex flows of electronic materials. He counters the assumption that e-waste is a post-consumer problem, pointing out that waste occurs at all stages of electronic materials' existence, and calls attention to the under-researched world of reuse and repair. Lepawsky explains that there are conflicting legal distinctions between electronic waste and non-waste, and examines a legal case that illustrates the consequences. He shows that patterns of trade do not support the dominant narrative of e-waste dumping but rather represent the dynamic ecologies of repair, refurbishment, and materials recovery. He asks how we know waste, how we measure it, and how we construe it, and how this affects our efforts to mitigate it. We might not put so much faith in household recycling if we counted the more massive amounts of pre-consumer electronic waste as official e-waste. Lepawsky charts the “minescapes,” “productionscapes,” and “clickscapes” of electronics, and the uneven “discardscapes” they produce. Finally, he considers both conventional and unconventional e-waste solutions, including decriminalizing export for reuse, repair, and upgrade; enabling ethical trade in electronics reuse, repair, refurbishment, and recycling; implementing extended producer responsibility; and instituting robust forms of public oversight.
