textbooks nova: Acquiring Intercultural Communicative Competence from Textbooks Lies Sercu, 2000 This book investigates whether and to what extent foreign language textbooks can contribute to promoting adolescent pupils' acquisition of intercultural communicative competence. It gives a full scientific account of a research project carried out amongst Flemish learners of German. The focus of the research was on the relationships between the culture teaching approaches adopted in textbooks and the pupils' learning of culture. Although the sub-title refers to a particular group of pupils learning a particular language, the study has more general bearing and constitutes a substantial contribution to the literature, and in particular empirical research, on the development of intercultural competence in and through foreign language education. The composition of the volume reflects the affective, cognitive and contact dimensions of the culture learning process. It also gives space to the theoretical platform on which the research was built, and to the research methodology adopted. Chapter 1 sets out to contextualise and define the research topic. It clarifies the study's position within the field of culture-and-language learning-and-teaching theory, practice and research. It also situates the investigation into the specific context of teaching and learning foreign languages-and-cultures in Flanders. In chapter 2 the theoretical framework informing the study is developed. Chapter 3 provides an overview of the techniques of data collection and analysis employed, of the kinds of data collected, and of the chronology of data collection. Chapters 4, 5 and 6 provide an interpretative description and analysis of the investigation's key concepts. Chapters 4 and 5 focus on the pupils' culture learning processes and analyse relationships between attitude, contact and perception data. In chapter 6 the culture teaching approaches adopted in the

investigated textbook series are described and evaluated with regard to their potential for promoting the pupils' learning of culture. Chapter 7, finally, provides a summary overview of the study's main findings and presents the main conclusions that can be drawn from the evidence presented in earlier chapters. It estimates the value of the study's research methodology and theoretical framework. It also reflects on how the research findings can find application and implementation.

textbooks nova: The Students and Their Books Danilo Facca, 2025-02-17 The topic of this volume is the teaching and learning practices in the major and minor academic centers of renaissance Europe and their relevance for early modern intellectual history. Academic knowledge is here regarded not as a finished product but as a process, induced by multiple factors and several conditions: the personalities and intellectual profiles of teachers and learners, the dialectic between their respective interests and roles, the institutional context, from the immediate one given by the particular school or university, with their courses and curricula, to the more remote one given by governing political power or surveilling religious authority, or the interplay between the two. Last but not least, one should consider the several impulses of an epoch that seem to impart to the historical course a sudden acceleration, inducing decisive, sometimes disruptive, changes to intellectual development: the spread of humanistic culture, the religious reformation and its consequences, the encounter with new epistemologies, the access to education of new social subjects, and – behind all these and as their common catalyst – the progressive establishment of the press as a means of learning consolidation and dissemination.

textbooks nova: Bodies Out of Control Matthew Weinstein, 2010 What is the cultural politics of science, health, and disease in the U.S.? Bodies Out of Control explores this question through a series of case studies. From its in-depth examination of the discussions of sickle-cell anemia, schistosomiasis, and cancer in middle school and high school textbooks to its analysis of the news coverage of the anthrax attacks of 2001, the book reveals the entanglements of science, colonialism, nationalism, and identity. The book also explores how the meaning of science itself is worked through in public discourses, offering alternatively medical salvation, confusion, and a vision of a world without pleasure. Finally, to explore what agency and a critical practice of engaging science in classrooms and elsewhere might look like, the book turns to the writings of politicized human research subjects, which demonstrate a spectrum of possibilities for more democratic engagements with science. As a whole, the book emphasizes the importance of engaging texts critically in science education and the ways that the cultural politics of science works through images of human and institutional bodies in and out of control.--Publisher's description.

textbooks nova: *A Cultural History of Physics* Károly Simonyi, 2025-02-28 While the physical sciences are a continuously evolving source of technology and of understanding about our world, they have become so specialized and rely on so much prerequisite knowledge that for many people today the divide between the sciences and the humanities seems even greater than it was when C. P. Snow delivered his famous 1959 lecture, *The Two Cultures*. In *A Cultural History of Physics*, Hungarian scientist and educator Károly Simonyi succeeds in bridging this chasm by describing the experimental methods and theoretical interpretations that created scientific knowledge, from ancient times to the present day, within the cultural environment in which it was formed. Unlike any other work of its kind, Simonyi's seminal opus explores the interplay of science and the humanities to convey the wonder and excitement of scientific development throughout the ages. These pages contain an abundance of excerpts from original resources, a wide array of clear and straightforward explanations, and an astonishing wealth of insight, revealing the historical progress of science and inviting readers into a dialogue with the great scientific minds that shaped our current understanding of physics. Beautifully illustrated, accurate in its scientific content and broad in its historical and cultural perspective, this book will be a valuable reference for scholars and an inspiration to aspiring scientists and humanists who believe that science is an integral part of our culture.

textbooks nova: Women’s Literary Tradition and Twentieth-Century Hungarian Writers

Anna Menyhért, 2019-12-16 In Women’s Literary Tradition and Twentieth-Century Hungarian Writers, Anna Menyhért presents the cases of five women writers whose legacy literary criticism has neglected or distorted, thereby depriving succeeding generations of vital cultural memory and inspiration. A best-selling novelist and poet in her time, Renée Erdős wrote innovatively about women's experience of sexual love. Minka Czóbel wrote modern trauma texts only to pass into literary history branded, as a result of ideological pressure in communist times, as an 'ugly woman'. Ágnes Nemes Nagy, celebrated for her ‘masculine’ poems, felt she must suppress her ‘feminine’ poems. Famous writer’s widow Ilona Harnos Kosztolányi’s autobiographical writing tackles the physical challenges of girls' adolescence, and offers us a woman’s thoughtful Holocaust memoir. Anna Lesznai, émigrée and visual artist, wove together memory and fiction using techniques from patchworking and embroidery.
