websites for used textbooks: Textbooks on Israel-Palestine Seyed Hadi Borhani, 2022-01-27
How is the Israel/Palestine question narrated in Western academia? What ideas dominate the key textbooks on the subject and what is presented as 'truth'? This book answers these critical questions. It is widely known that Western support of Israel played a vital role in the realization of Zionist objectives in Palestine. But academic support of Israel in the West has been a neglected issue, with Western academic knowledge being regarded as impartial and objective. This book reveals that this understanding of Western academic knowledge is wrong when it comes to the Israel/Palestine question. Rather, knowledge has been biased, misleading, and dogmatic and Western college students are subscribing to 'factual histories' based on theories at best, if not fiction. The book is the first empirical investigation able to document this partial reporting of history. Seyed Hadi Borhani examines the most popular college-level textbooks used to teach the history of the Israel/Palestine in Western universities, combining 'textbook analysis' (to determine how the dominant academic texts report the question) and a 'context analysis' (to identify who 'manufactures' the dominant knowledge). The book provides a historical map of how the Israel-Palestine conflict is understood in the West. The book can be used as a critique for students and professors to use alongside textbooks and is a vital and much-needed intervention into the state of affairs in Western academia.

websites for used textbooks: *Textbooks in Academic Libraries* Chris Diaz, 2018-12-03 Shortly after the syllabi are posted, and long before the beginning of the term, interlibrary loan departments at academic libraries will have filled or rejected innumerable textbook requests. While it would be unwise if not impossible to buy and circulate every textbook at a college or university, there are

many academic libraries who are selectively adding textbooks to their collections. And the practice seems to be gaining momentum. In this volume, the Association for Library Collections and Technical Services (ALCTS) and editor Chris Diaz gather case studies that pull together creative approaches and best practices for print textbook reserve programs. This book discusses such topics as results and analysis from a detailed survey of a state university's core-course textbook reserve program; funding sources for starting or piloting a program; using aggregated enrollment, grade, and textbook cost data to identify high impact courses; identifying course-related books that are in the library's collection or fit an existing collection policy; workflow for using bookstore data with ILS and purchasing systems; and using LibGuides and Google Sheets to publicize textbook holdings, and how a back-end database supports discovery for students and reporting for reserves staff. A textbook reserve program can be one way of helping students who are struggling with the high cost of textbooks, and this book spotlights a variety of examples that can be used as models.

websites for used textbooks: *STEM Teachers and Teaching in the Digital Era* Yifat Ben-David Kolikant, Dragana Martinovic, Marina Milner-Bolotin, 2020-02-20 This book brings together researchers from Israel and Canada to discuss the challenges today's teachers and teacher-educators face in their practice. There is a growing expectation that the 21st century STEM teachers re-examine their teaching philosophies and adjust their practices to reflect the increasing role of digital technologies. This expectation presents a significant challenge to teachers, who are often asked to implement novel technology-rich pedagogies they did not have a chance to experience as students or become comfortable with. To exacerbate this challenge, the 21st century teachers function not only in a frequently-changing educational reality manifested by continuous reforms, but are also bombarded by often contradictory and competing demands from the legislators, administrators, parents, and students. How do we break the vicious circle of reforms and support STEM teachers in making a real change in student learning? This book is unique for at least three reasons. First, it showcases research situated in Israel and Canada that examines the challenges today's teachers and teacher-educators face in their practice. While the governments of both countries emphasize STEM education, their approaches are different and thus provide for interesting comparisons. Second, in addition to including research-based chapters, prominent scholars discuss the contributions in each of the book sections, problematizing the issues from a global perspective. Third, technology has a potential to empower teachers in this era of change, and this book provides the unique insights from each country, while allowing for comparisons, discussing solutions, and asking new questions. This book will be of interest to all involved in STEM teacher education programs or graduate programs in education, as well as to educational administrators interested in implementing technology in their schools.
