walc workbooks: *WALC 1* Kathryn J. Tomlin, 2002 Written in the best-selling format of the WALC series, these activities have: easy-to-read format simple, concise language application to a wide range of acquired language disorders consistent progression of complexity within and between tasks Activities are organized by five skill areas: Matching and Identification Tasks begin simply, with single, more concrete items and progress to more complex tasks. The tasks are receptive. Clients match shapes, letters of the alphabet, and words. Then, they match written words, phrases, and sentences to pictures. Following Commands Clients follow oral and written directions requiring comprehension of body parts, objects, prepositions (e.g., over, out), and adjectives (e.g., heaviest, shortest). Vocabulary These activities target deficits in comprehension and expression. Clients choose words and supply words to complete word pairs, familiar phrases, and synonyms. Other tasks include matching words to simple definitions and clues; naming items by word class; and supplying item functions and descriptions. Answering Questions The client either listens to, or reads a sentence, and answers simple wh- questions. The questions require one-, two-, and three-word responses. Yes/no questions about object functions progress from simple (e.g., Do boats float?) to more complex and abstract (e.g., Is a road wider than a sidewalk?). Comparison, before/after, and simple reasoning questions round out the activities. Functional Language These activities build on the previous units by increasing the complexity and content level. Questions may have more than one right answer or require expression of opinions. Tasks include cloze phrase and sentence completion, open sentence completion, paragraph comprehension, paragraph fill-in-the-blanks, predicting from a short story, and formulating short stories. 222 pages, answer key

walc workbooks: WALC 12 Workbook of Activities for Language and Cognition Kathryn J. Tomlin, 2015-11-02 Stimulate neurologically-impaired clients' executive functioning with activities that use relevant content, themed around home activities and home maintenance. Written in the best-selling format of the WALC series, Executive Functioning includes reproducible exercises and activities that can be used in individual or group situations. Many of the tasks involve working memory, which taps into the client's general knowledge base, and encourages the client to ask others for help or to use whatever is available to gain the information they need to answer a question accurately. Most of the tasks provide answers for the client to choose from, which stimulates two specific thinking processes: First, it causes the client to evaluate all of the choices to determine whether the provided items fit the question, giving the client practice with self-analyzing and selection based on fact and appropriateness. Second, as these exercises were not developed for word finding or memory for general information improvement, the client won't be penalized if he has those deficits along with executive thinking deficits. Many of the items have multiple appropriate answers, which gives the client practice with thought flexibility. Many of the exercises have already been answered and the client must analyze whether the selected response was accurate. This provides practice with meta-cognitive skills for identifying, analyzing and planning. Several exercises have no right or wrong answers, as the responses will be based on the client's subjective opinions and preferences. Many of the tasks will assist the client in developing decision-making skills, based on fact as opposed to unverified opinions.
