becker replacement textbooks: *Scientific Imperialism* Uskali Mäki, Adrian Walsh, Manuela Fernández Pinto, 2017-10-16 The growing body of research on interdisciplinarity has encouraged a more in depth analysis of the relations that hold among academic disciplines. In particular, the incursion of one scientific discipline into another discipline's traditional domain, also known as scientific imperialism, has been a matter of increasing debate. Following this trend, Scientific Imperialism aims to bring together philosophers of science and historians of science interested in the topic of scientific imperialism and, in particular, interested in the conceptual clarification, empirical identification, and normative assessment of the idea of scientific imperialism. Thus, this innovative volume has two main goals. Indeed, the authors first seek to understand interdisciplinary relations emerging from the incursion of one scientific discipline into one or more other disciplines, such as in cases in which the conventions and procedures of one discipline or field are imposed on other fields; or more weakly when a scientific discipline seeks to explain phenomena that are traditionally considered proper of another discipline's domain. Secondly, the authors explore ways of distinguishing imperialistic from non-imperialistic interactions between disciplines and research fields. The first sustained study of scientific imperialism, this volume will appeal to postgraduate students and postdoctoral researchers interested in fields such as Science and Technology Studies, Sociology of Science & Technology, Philosophy of Science, and History of Science.

becker replacement textbooks: Foundations of Animal Behavior Lynne D. Houck, Lee C. Drickamer, 1996-08 Beginning with Darwin's work in the 1870s, Foundations of Animal Behavior selects the most important works from the discipline's first hundred years—forty-four classic papers—and presents them in facsimile, tracing the development of the field. These papers are classics because they either founded a line of investigation, established a basic method, or provided a new approach to an important research question. The papers are divided into six sections, each introduced by prominent researchers. Sections one and two cover the origins and history of the field and the emergence of basic methods and approaches. They provide a background for sections three through six, which focus on development and learning; neural and hormonal mechanisms of behavior; sensory processes, orientation, and communication; and the evolution of behavior. This outstanding collection will serve as the basis for undergraduate and graduate seminars and as a reference for researchers in animal behavior, whether they focus on ethology, behavioral ecology, comparative psychology, or anthropology. Published in association with the Animal Behavior Society

becker replacement textbooks: A New History of Redemption Gerald R. McDermott, 2024-03-19 Southwestern Journal of Theology 2024 Book Award (Honorable Mention, Church History / Historical Theology / Biography) Although Jesus's work of redemption is often viewed as a singular event, a careful examination of Scripture reveals that the Messiah began his redemptive work just after the fall and will continue it to the end of the world. In the spirit of Jonathan Edwards's History of the Work of Redemption, distinguished theologian Gerald McDermott traces the progress of redemption throughout the Bible and Church history. This book connects the dots surrounding Israel, redemption by the Jewish Messiah, secular and sacred history, the world religions, and Jewish-Christian worship through liturgy and sacraments. It shows how Jesus as Messiah was redeeming throughout Old Testament history, and it carries that story up through the last two millennia. McDermott contends that it is only through a historical examination of the

Messiah's redemption amid the turmoil of the world and the worship of his people that one can best see God's beauty.

becker replacement textbooks: Recognizing Indigenous Languages Nicholas Limerick, 2023 What follows when state institutions name historically oppressed languages as official? What happens when bilingual education activists gain the right to coordinate schooling from upper-level state offices? The intercultural bilingual school system in Ecuador has been one of the most prominent referents of Indigenous education in the Americas. Since its establishment in 1988, members of Ecuador's pueblos and nationalities have coordinated a second national school system that includes the teaching of Indigenous languages. Based on more than two years of ethnographic research in Ecuador's Ministry of Education, at international and national conferences, in workshops, in schools, and with families, *Recognizing Indigenous Languages* considers how state agents carry out linguistic and educational politics and policies in eras of greater inclusivity and multiculturalism. This book shows how institutional advances for bilingual education and Indigenous languages have been premised on affirming the equality-and the equivalency-of the linguistic and cultural practices of members of Indigenous pueblos and nationalities with other Ecuadorians. Major responsibilities like serving as national state agents, crafting a standardized variety of the Kichwa language family, translating legal documents to Kichwa, and teaching Indigenous languages in schools have provided vast authority, representation, and visibility for those languages and their speakers. However, the everyday work of directing a school system and making Kichwa a language of the state includes double binds that work against the very goals of autonomous schooling and getting people to speak and write Kichwa.
