best web design textbooks: Research and Advanced Technology for Digital Libraries Panos Constantopoulos, Ingeborg T. Solvberg, 2003-06-30 Digital libraries (DLs) are major advances in information technology that frequently fall short of expectations [7, 28]. Covi & Kling [7] argue that understanding the wider context of technology use is essential to understanding digital library use and its implementation in different social worlds. Recent health informatics research also suggests that social and organisational factors can determine the success or failure of healthcare IT developments [8, 11, 12]. Heathfield [11] suggests that this is due to the complex, autonomous nature of the medical discipline and the specialized (clinician or software engineer) approach to system development. Negative reactions to these systems is often due to inappropriate system design and poor implementation. However, there may be other less obvious social and political repercussions of information system design and deployment. Symon et al [26] have identified, within a hospital scenario, how social structures and work practices can be disrupted by technology implementation. Although these systems often deal with sensitive, personal information, other system design research has found that apparently innocuous data can be perceived as a threat to social and political stability [1,2,3]. To understand the impact of DLs within the medical profession, an in-depth

evaluation is required of the introduction and later development of these applications within their specific social and organisational settings. However, as Covi & Kling [7] have highlighted, there are few high-level theories that aid designers in understanding the implication of these issues for DL design and implementation.

best web design textbooks: *Worth-Focused Design, Book 1* Gilbert Cockton, 2022-05-31 Design now has many meanings. For some, it is the creation of value. For others, it is the conception and creation of artefacts. For still others it is fitting things to people. These differences reflect disciplinary values that both overlap and diverge. All involve artefacts: we always design things. Each definition considers people and purpose in some way. Each handles evaluation differently, measuring against aesthetics, craft standards, specifications, sales, usage experiences, or usage outcomes. There are both merits and risks in these differences, without an appropriate balance. Poor balance can result from professions claiming the centre of design for their discipline, marginalising others. Process can also cause imbalance when allocating resources to scheduled stages. Balance is promoted by replacing power centres with power sharing, and divisive processes with integrative progressions. A focus on worth guides design towards worthwhile experiences and outcomes that generously exceed expectations. This book places a worth focus (Wo-Fo) in the context of design progressions that are Balanced, Integrated, and Generous (BIG). BIG and Wo-Fo are symbiotic. Worth provides a focus for generosity. Effective Wo-Fo needs BIG practices.
