bookbyte sell textbooks: Evolución de las startups en el mundo del libro Javier Celaya, Kershama St. Luce, José Antonio Vázquez, 2017-05-20 Las startups hoy nos resultan a todos familiares, sobre todo a la hora de hablar de emprendimiento y tecnología en cualquier ámbito empresarial. Aunque es un término que desde hace tres o cuatro años se emplea con mayor frecuencia, en realidad es algo de que algunos -entre ellos nosotros en Dosdoce- hemos venido hablando desde hace años al compartir y analizar la relación de las nuevas tecnologías con, en nuestro caso, el sector cultural y ahora en concreto con el sector editorial y en el mundo del libro, en general. Este informe trata de ofrecer una instantánea general actual para retomar el debate e incluso a conseguir una mayor voluntad de inversión, dado que el editorial -como el sector cultural en general- no es un campo que destaque por sus inversiones en este tipo de empresas emergentes. El estudio nace de la iniciativa de Thad McIlroy -involucrado desde finales de los 90 en el trabajo de empresas tecnológicas aplicadas al mundo del libro, tanto como inversor como consultor-, que publicó a finales de 2016 el informe 'An Authoritative Look at Book Publishing Startups In the United States', donde se da una relación actual de cerca de 900 startups en relación al mundo del libro y que se comenzó a compilar a comienzos de 2012. La lista actualizada que aporta Thad (y que acompaña a este documento ahora también actualizado por nosotros) nace de una lista que Michael Bashkar ya había elaborado, de modo que en ese momento ambos estaban en la misma labor recopilatoria. En Dosdoce.com hemos querido darle un enfoque más global fijándonos sobre todo en el espectro español y latinoamericano, y añadiendo ejemplos europeos.

bookbyte sell textbooks: *Consumer Optimization Problem Solving* Alfred L Norman, 2014-12-15 What algorithms are tractable depends on the speed of the processor. Given the speed of digital computers, polynomial algorithms are considered tractable. But, a human can take several seconds to make one binary comparison between two pens. Given this slow speed, sublinear algorithms are considered tractable for an unaided human and this defines Simon's concept of bounded rationality. Humans make simplifications to solve the intractable consumer optimization problem. Consumers search for goods and services item-by-item, which greatly reduces the number of alternatives to consider. In addition, consumers have operators that can process a set in a single operation. Also, consumers budget by incremental adjustment. In considering consumer performance the question to ask is how close to optimal is consumer performance and not whether consumers optimize as a yes/no question. Given the ordinal nature of utility theory this creates a basic measurement problem. The book presents a review of the literature on consumer performance. This is an opportune time to study consumer procedures because the Internet provides a media to make substantial improvements in consumer performance. The book includes a case study comparing the performance of a digital camera selection code with the advice of sales people. A field experiment demonstrates that the software code provides better advice.
