These sections provide context and a framework for understanding subsequent topics.

Thematic Topics in Psychology

Qgden, 2015-06-02 Excerpt from An Introduction to General Psychology The preface of a book is usually an apology for its existence. This one is no exception to the rule. The large number of already available text-books in Psychology makes pertinent the question: Why another? In attempting to justify the appearance of this one, I would first call attention to the need of a growing science, such as Psychology, for constant revision, and the envisagement of its problems from various angles. This has doubtless been the occasion for many of the texts which we already have. The chief motives for the writing of the present book were two. The first of these was to supply a general elementary text-book which would meet the demands of the average student beginner a little more adequately than has been done hitherto. After ten years' experience in teaching a first course in Psychology, I have become convinced that the mode of attack usually followed fails to supply the student with the sort of introduction into the science of mind that will enable him, on the one hand, to connect his Psychology with everyday life, and, on the other hand, to apprehend the bearings of this science upon Philosophy, Education, Sociology and Biology. general psychology textbooks: Readings in General Psychology Edward Stevens Robinson, 1923 We are publishing this volume in the belief that the student beginning the study of psychology can profitably read much more material than is commonly assigned him. It is hardly the purpose of a first course to train the student to such a point that he can read the technical articles of the psychological journals, but he should have enough practice to enable him to read with intelligence the more general literature of the subject, whatever its point of view. But the accomplishment of even this latter purpose is becoming increasingly difficult. Our elementary courses contain so many students that library assignments are in many cases all but impossible. In light of this fact, we feel that instructors will welcome a single volume, which contains an ample and representative supply of reading materials. Such a volume has an advantage over a library reserve shelf in that the students will not be discouraged by being unable to reach their assignments when and where they find it convenient to study. It has an advantage over a second textbook in that it contains more than another, often conflicting, system of description. In those cases where the instructor is interested in presenting his own system, this volume will furnish reading materials, which will be useful without coming into constant conflict with the lectures. While we do not believe that differences of opinion should be hidden from the student, we are convinced that constant conflict between instructor and text is very bad from a pedagogical standpoint. We have chosen these readings for the beginning student, and we hope that few of them will be beyond his comprehension. Now and again terms appear in the readings, which have not previously been defined. Usually where the meaning of such terms cannot be inferred from the context, we have defined them in footnotes. It is no disadvantage, however, if the student is occasionally forced to use a dictionary. The exercises included with the readings are not, in most cases, questions the answers to which can be taken directly from the text. Rather, they are problems which the student should be in a position to attack when he has mastered a given reading or group of readings. In many cases, these exercises are designed to bring out important points with which the readings do not happen to deal. In other cases, they are designed to bring up problems which will hardly be solved by either instructor or student, but which may profitably be discussed. Where suitable materials could be found in the sources, we have used them. Where these sources were too technical, too long, or too saturated with dead issues, we have taken more suitable restatements. We have exercised considerable freedom in using certain excerpts, which are not particularly representative of the writers from whom they are taken. While we have

made slight changes in many of the selections, these changes are practically all of two kinds. First, sentences or words have been eliminated in order to avoid issues, which could not be discussed at length, and which we did not feel could be handled justly in a very brief way. Second, sentences or words have been modified or eliminated in order to disconnect a selection from its original setting. In neither of these cases, we feel sure, have meanings been attributed to an author which he himself did not intend. While we have arranged the contents of this volume along conservative lines, the readings can be taken up in almost any order. We have put side by side passages written from different points of view, and though we believe the student should get used to these differences and learn to see beyond them, there is no reason why the instructor should not emphasize certain facts and theories by a judicious choice from among these materials.

The first of these was to supply a general elementary text-book which would meet the demands of the average student beginner a little more adequately than has been done hitherto. After ten years' experience in teaching a first course in Psychology, I have become convinced that the mode of attack usually followed fails to supply the student with the sort of introduction into the science of mind that will enable him, on the one hand, to connect his Psychology with every day life, and, on the other hand, to apprehend the bearings of this science upon Philosophy, Education, Sociology and Biology. It has been my experience that so much time was consumed in the study of the nervous system, and of the experimental data of sensation and perception, that in a brief course no adequate consideration could be given to mind as a whole, and to the important topics of personality and character. To introduce a student to the study of Psychology is one thing, and no doubt the detailed study of psychophysiological data, with their appropriate laboratory exercises, is a most satisfactory means to this end. But the function of Psychology in an undergraduate college course is another thing, and is not purely departmental. The average student does not go beyond the first brief course. He does, however, frequently elect further work in Philosophy and Education, Sociology and Biology. In coming to these subjects he should bring with him psychological conceptions of a general sort that will be useful to him. It is the consciousness of this need which has supplied the first motive for this book. How well I may have succeeded, it is beyond me to say. Many defects will doubtless be apparent to the critical reader. I can only hope that they may not prove serious enough to invalidate the purpose which I have had in view. The question was continually pressing in the treatment of each topic: How much and how little should be said? In my endeavor to keep the book within such limits as would make it practicable to cover the ground completely in a one-term course.
