The market can never be saturated. It's something brand new and is making a lot of people over \$10k per month, including absolute beginners, because it really doesn't have to do with having technical or previous knowledge. As long as you have internet and a computer, you can do this alone or even outsource it as explained in this guide. You can also do it inside our community. You don't need anything like SEO, Facebook ads, Google ads, blogging, or content marketing. It's not affiliate marketing or multilevel marketing. You don't need to know programming or even email marketing. You don't need your own website. I think you get the picture that this is very different, right? There were so many success stories with our strategy. I've never seen so many success stories like ours. This is a really unique strategy that is taught only in our own community, and our students are having so much success with it. So if you're super busy in life, and you find marketing stuff just too much for you, then know that ours is actually just a strategy that need no marketing to work, so you can make a residual income online. You can even build this out into a business, although it's really just a strategy and methods that work. Briefly this is a strategy that is really eye opening. It's the stuff you can do by finding a little need in the Amazon marketplace and then finding a really simple way to fulfill that need at awesome profits. I've been doing online businesses for almost 20 years and I've never seen anything as good as this. So I'm really excited to show you this. half price books textbooks: The Book in Society Solveig Robinson, 2013-11-15 *The Book in Society: An Introduction to Print Culture* examines the origins and development of one of the most important inventions in human history. Books can inform, entertain, inspire, irritate, liberate, or challenge readers, and their forms can be tangible and traditional, like a printed, casebound volume, or virtual and transitory, like a screen-page of a cell-phone novel. Written in clear, non-specialist prose, *The Book in Society* first provides an overview of the rise of the book and of the modern publishing and bookselling industries. It explores the evolution of written texts from early forms to contemporary formats, the interrelationship between literacy and technology, and the prospects for the book in the twenty-first century. The second half of the book is based on historian Robert Darnton's concept of a book publishing "communication circuit." It examines how books migrate from the minds of authors to the minds of readers, exploring such topics as the rise of the modern notion of the author, the role of states and others in promoting or restricting the circulation of books, various modes of reproducing and circulating texts, and how readers' responses help shape the form and content of the books available to them. Feature boxes highlighting key texts, individuals, and developments in the history of the book, carefully selected illustrations, and a glossary all help bring the history of the book to life.

half price books textbooks: *Consumer Optimization Problem Solving* Alfred L Norman,

2014-12-15 What algorithms are tractable depends on the speed of the processor. Given the speed of digital computers, polynomial algorithms are considered tractable. But, a human can take several seconds to make one binary comparison between two pens. Given this slow speed, sublinear algorithms are considered tractable for an unaided human and this defines Simon's concept of bounded rationality. Humans make simplifications to solve the intractable consumer optimization problem. Consumers search for goods and services item-by-item, which greatly reduces the number of alternatives to consider. In addition, consumers have operators that can process a set in a single operation. Also, consumers budget by incremental adjustment. In considering consumer performance the question to ask is how close to optimal is consumer performance and not whether consumers optimize as a yes/no question. Given the ordinal nature of utility theory this creates a basic measurement problem. The book presents a review of the literature on consumer performance. This is an opportune time to study consumer procedures because the Internet provides a media to make substantial improvements in consumer performance. The book includes a case study comparing the performance of a digital camera selection code with the advice of sales people. A field experiment demonstrates that the software code provides better advice.
