language learning textbooks: Fandom Language Learning Jieun Kiaer, Alfred W. T. Lo, 2025-02-06 Standing at the intersection of fan culture, digital technology, and language learning, this book advocates for a transformative shift in language education in the AI age. Introducing the concept of fandom language learning, it illustrates how enthusiasm for specific interests motivates fans to learn languages, resulting in immersive and personalised learning experiences. Tracing the evolution of digital platforms shows how this has become possible thanks to their pivotal role in transforming language learning from a solitary, traditional endeavour into a vibrant, community-driven practice. The authors examine the psychological underpinnings of fandom language learning and how emotional engagement and cultural immersion can help to foster motivation. They also weigh the impact of social media and AI on language learning, emphasising the potential for these technologies to smooth the way for more interactive, engaging, and effective language education. Through a translanguaging approach, they also give new perspectives on the ways in which digital platforms enable learners to transcend linguistic boundaries and how fandom learners can harness creative expression and multilingual engagement. Building on these ideas, Fandom Language Learning also sets out practical guidance for educators on how to use fandom

culture to motivate foreign language learning and increase students' Foreign Language Enjoyment (FLE), envisioning a future where language education is not only more aligned with learners' passions but also more responsive to the demands of a digital, multilingual world.

language learning textbooks: Representations of the World in Language Textbooks Karen Risager, 2018-01-08 This book presents a new and comprehensive framework for the analysis of representations of culture, society and the world in textbooks for foreign and second language learning. The framework is transferable to other kinds of learning materials and to other subjects. The framework distinguishes between five approaches: national studies, citizenship education studies, cultural studies, postcolonial studies and transnational studies. In a series of concrete analyses, the book illustrates how one can describe and uncover representations of the world in textbooks for English, German, French, Spanish, Danish and Esperanto. Each analysis is accompanied by suggestions of possible supplements and changes. The book points to the need for language learning materials to deal seriously with knowledge about the world, including its diversities and problems.

language learning textbooks: Intersections of Gender and Ethnicity in English

Language Learning Texts Amy Burden, 2023-08-01 *Intersections of Gender and Ethnicity in English Language Learning Texts* offers a fresh and relevant interrogation of educational materials for all students, researchers, and educators engaging in critical language study. Drawing on her own extensive research, Amy Burden offers up a first-of-its-kind critical linguistic analysis of gender and ethnicity representation in English Language Learning materials and an update for the US ESL textbook market 40 years overdue. Using accessible definitions, explanations, and examples of critical race, corpus, literary, and feminist theories, Burden systematically deconstructs the theoretical and textual ways in which gender representations reinforce patriarchal ideologies. Ultimately, Burden argues that Critical Literacy and Critical Race Pedagogy are necessary tools for ensuring equitable, egalitarian representation and combatting the harmful impact that these themes have had on readers and communities.

language learning textbooks: Understanding Multimodal Discourses in English

Language Teaching Textbooks Christopher A. Smith, 2022-08-11 Textbooks are indispensable components and in some case the cornerstones of the mission of English Language Teaching (ELT). However, they are artefacts of a pedagogical culture that rarely echo the concerns of their most prolific consumers: teachers and students. This book offers a useful framework for evaluating ELT textbooks from a critical discourse perspective; one that is based on sound current research but also offers practical guidance to teachers. Building from a foundational understanding of ELT textbooks, the author presents a systematic procedure to critically analyze their multimodal discourse, examine how those discourses are negotiated between teachers and students in class, and measure how those consumers privately value the lessons. The book provides teachers with the tools they need to select and adapt materials based on critical multimodal discourse analysis, where not only the text but the pictures, websites, audio, visual elements too are subjected to a process which can reveal underlying ideologies, assumptions, omissions and reifications. The triangulated approach, demonstrated in a series of vignettes featuring Korean university students and

native-English-speaking instructors, can inform textbook choice, instigate change, and inspire lesson re-contextualization to best suit the needs of its primary consumers.

language learning textbooks: Meaning-Focused Materials for Language Learning Marina Bouckaert, Monique Konings, Marjon van Winkelhof, 2019-01-10 This publication is a result of the joint conference held by MATSDA and Fontys University of Applied Sciences, the Netherlands, in Tilburg in June 2017. MATSDA is an international materials development association founded in 1993 which serves to bring together researchers, teachers, materials developers and publishers in an effort to improve the effectiveness of language learning materials. The 2017 conference centred on issues related to the development of meaning-focused materials for language learning, and attracted presenters from twenty-five countries stretching from Greenland to Brazil. These issues are reflected in the chapters in this volume, with each one focusing on a different aspect of meaning-focused materials and many of them introducing the reader to previously unexplored facets of the theory of meaning-focused instruction and its application to materials development. The contributions here are of essential value to post-graduate students, to teachers, to materials developers and to researchers. They are written to be academically rigorous, but at the same time accessible to newcomers to the field and to experienced experts alike.

language learning textbooks: New Materialist Explorations into Language Education Johanna Ennser-Kananen, Taina Saarinen, 2022-10-10 This open access book analyzes language education through a socio-material framework. The authors revisit their position as researchers by decentering themselves and humans in general from the main focus of research activities and giving way to the materialities that are agentive but often overlooked parts of our research contexts and processes. Through this critical posthumanist realism, they are able to engage in research that sees society as an ethical interrelationship between humans and the material world and explore the socio-materialities of language education from the perspectives of material agency, spatial and embodied materiality, and human and non-human assemblages. Each chapter explores language educational contexts through a unique lens of (socio)materiality. Based on how the authors conceptualize (socio)materiality, the book is organized in three sections that seek answers to the following overarching questions: In what ways do material agencies emerge in language educational contexts? How are educational choices and experiences intertwined with materialities of spaces and bodies? What assemblages of human and non-human may occur in language education contexts? Each chapter questions, in its own way, the notion of the human subject as rational, enlightened being and sole possessor of agency, and offers examples of allowing for other-than-human agency to enter the picture. Together, the contributors exemplify how researchers who have been committed to social constructionist thinking for most of their careers learn to make space for new theories, thus inspiring and encouraging readers to remain open for new intellectual and embodied endeavors.
