learn japanese without textbooks: Second Language Literacy Practices and Language Learning Outside the Classroom Miho Inaba, 2018-11-21 This book presents a comprehensive and detailed study of literacy practices and language use outside of the classroom by university students of Japanese. It investigates both tasks related to classes (e.g. homework and preparation for classes) and voluntary activities in the target language (e.g. watching TV and writing emails) and discusses how values, motivations and types of activities differ between the two contexts. It employs sociocultural perspectives to observe reading and writing activities within and under the influence of individual and social contexts, such as learner motives, peer networks and the language classroom, and contributes to the related research areas in the field of second language acquisition, such as motivation, autonomous language learning and language learning strategies. Crucially, the book not only documents out-of-class literacy activities, but also examines which teaching practices facilitate and promote such out-of-class language learning and use. It considers which literacy activities in the target language students undertake out-of-class, which factors encourage or discourage such out-of-class activity and how and with which tools they undertake these activities. As such the book provides guidance for classroom teaching and suggests that slight changes to teaching practices in the classroom may enhance autonomous learning outside the classroom.

learn japanese without textbooks: Applying Theory and Research to Learning Japanese as a Foreign Language Masahiko Minami, 2009-03-26 Complex issues surround second language acquisition and foreign language learning in any language. There is no doubt that individuals are capable of acquiring two or more languages at different stages of human development, particularly in childhood. Research investigating how adults acquire two languages also carries important insights into what takes place during later stages of human development. From the fact that early and late bilinguals are faced with two languages in diverse stages of cognitive development we can predict differences in language processing between these two groups. In the case of the Japanese language, unfortunately, far fewer studies — particularly those written in English — have been presented on foreign-language learners and bilingual children. Designed to address some of these gaps in the literature, the chapters included in this book discuss various issues with regard to adult learners of Japanese as an L2 and English-Japanese bilingual children. This book provides the reader with an overview of the field of Japanese linguistics and its current concerns. One of the main purposes of the book is to provide a forum in which to examine contributions in a variety of areas of Japanese linguistics to the teaching and learning of Japanese in the L2 classroom. This book has at least two interrelated areas of benefit. First, both researchers and teachers benefit from each other's expertise and receive new insights that apply to their respective fields. Second and more important, the book serves as a forum to promote ways in which we can apply linguistic theory to the learning of Japanese as an L2. That is, what researchers have learned from both theory and practice can suggest what is important for the teaching of language; conversely, language educators have a great deal to offer linguists regarding the phenomenon of language. Thus, the goal of this book is to integrate theoretical concepts and empirical research findings in L2 development in order to apply them to educational practice.
