psych 101 textbooks: *Intelligence, Race, And Genetics* Frank Miele, 2018-03-05 In a series of provocative conversations with Skeptic magazine's senior editor Frank Miele, renowned University of California-Berkeley psychologist Arthur R. Jensen details the evolution of his thoughts on the nature of intelligence, tracing an intellectual odyssey that leads from the programs of the Great Society to the Bell Curve Wars and beyond. Miele cross-examines Jensen's views on general intelligence (the g factor), racial differences in IQ, cultural bias in IQ tests, and whether differences in IQ are due primarily to heredity or to remediable factors such as poverty and discrimination. With characteristic frankness, Jensen also presents his view of the proper role of scientific facts in establishing public policy, such as Affirmative Action. 'Jensenism' the assertion that heredity plays an undeniably greater role than environmental factors in racial (and other) IQ differences, has entered the dictionary and also made Jensen a bitterly controversial figure. Nevertheless, *Intelligence, Race, and Genetics* carefully underscores the dedicated lifetime of scrupulously scientific research that supports Jensen's conclusions.

psych 101 textbooks: *Human Psychology 101* Alan G. Fields, 2016-08-21 Understanding the

human mind is a complicated array of wirings of the past combined with the physical and chemical inclinations of the present. Psychology is the study of the human brain, but it's so much more than a mere dissection of the gooey gray mass trapped in our skulls; it's a study of what makes us tick as individuals and as a species. *Human Psychology 101: Understanding the Human Mind and What Makes People Tick* is meant to show you the facets of a human being and how they work together to make a person tick. It's not a psychological treatise or a DSM-V. It's a collection of my own research of psychology and stories from my life and those of my friends and acquaintances that help illustrate the principles I'm going to be telling you about. I will be dividing this book into seven aspects of human psychology: emotions, personality, decision-making, morality, perception, behavior, and relationships. To understand what makes someone tick is to have mastered a sort of psychological sleight of hand, and I hope that this book serves as a useful step on your way to mastery over that brand of magic trick. How human beings think and behave is an unendingly fascinating study, one that reveals how simple and elegant and, on the other hand, complex and mysterious we all are. I hope you are as pumped as I am to think about the inner workings of how people tick.
