teaching textbooks review: Understanding Multimodal Discourses in English Language Teaching Textbooks Christopher A. Smith, 2022-08-11 Textbooks are indispensable components and in some case the cornerstones of the mission of English Language Teaching (ELT). However, they are artefacts of a pedagogical culture that rarely echo the concerns of their most prolific consumers: teachers and students. This book offers a useful framework for evaluating ELT textbooks from a critical discourse perspective; one that is based on sound current research but also offers practical guidance to teachers. Building from a foundational understanding of ELT textbooks, the author presents a systematic procedure to critically analyze their multimodal discourse, examine how those discourses are negotiated between teachers and students in class, and measure how those consumers privately value the lessons. The book provides teachers with the tools they need to select and adapt materials based on critical multimodal discourse analysis, where not only the text but the pictures, websites, audio, visual elements too are subjected to a process which can reveal underlying ideologies, assumptions, omissions and reifications. The triangulated approach, demonstrated in a series of vignettes featuring Korean university students and native-English-speaking instructors, can inform textbook choice, instigate change, and inspire lesson re-contextualization to best suit the needs of its primary consumers.

Drawing on her own extensive research, Amy Burden offers up a first-of-its-kind critical linguistic analysis of gender and ethnicity representation in English Language Learning materials and an update for the US ESL textbook market 40 years overdue. Using accessible definitions, explanations, and examples of critical race, corpus, literary, and feminist theories, Burden systematically deconstructs the theoretical and textual ways in which gender representations reinforce patriarchal ideologies. Ultimately, Burden argues that Critical Literacy and Critical Race Pedagogy are necessary tools for ensuring equitable, egalitarian representation and combatting the harmful impact that these themes have had on readers and communities.

teaching textbooks review: *Economy, Society and Politics* Christian Fridrich, Udo Hagedorn, Reinhold Hedtke, Philipp Mittnik, Georg Tafner, 2024-04-05 The interconnections of economy, society and politics so obviously determine socio-economic and political structures and problem situations, current ways of thinking and acting as well as the collective perception of solution options that their still low attention in university teaching and school education is surprising. Phenomena such as pandemics, climate change, migration or authoritarianism make the close, complex and contradictory connections between economy, society and politics tangible. Against this background, socioeconomic research, teaching and education are urgently needed. The theme volume aims to contribute to this by presenting research contributions on problem complexes such as economy and democracy, perspectivity and multiperspectivity, situation, interest and politics, subject and subjectification, and discipline and curriculum.

teaching textbooks review: Learning to Teach English and the Language Arts Peter Smagorinsky, 2020-04-16 Drawing together Smagorinsky's extensive research over a 20-year period, *Learning to Teach English and the Language Arts* explores how beginning teachers' pedagogical concepts are shaped by a variety of influences. Challenging popular thinking about the binary roles of teacher education programs and school-based experiences in the process of learning to teach, Smagorinsky illustrates, through case studies in the disciplines of English and the Language Arts, that teacher education programs and classroom/school contexts are not discrete contexts for learning about teaching, nor are each of these contexts unified in the messages they offer about teaching. He explores the tensions, not only between these contexts and others, but within them to illustrate the social, cultural, contextual, political and historical complexity of learning to teach. Smagorinsky revisits familiar theoretical understandings, including Vygotsky's concept development and Lortie's apprenticeship of observation, to consider their implications for teachers today and to examine what teacher candidates learn during their teacher education experiences and how that learning shapes their development as teachers.

The dataset, upon which this book builds, consists of a collection of 18 textbooks, which belong to five sets of locally developed English textbooks for grade 10 to grade 12 students. These series were used in all public schools from the mid-1980s to the present. During this period, schooling expanded rapidly in Vietnam, while English also gained increasing prominence within the school system. This book examines the curricular content of these textbooks and presents a long-term analysis of the 'hidden' curricular content in light of Vietnam's recent history and its government's concerns about national identity.

teaching textbooks review: We Demand Roderick A. Ferguson, 2017-08-22 In the post-World War II period, students rebelled against the archaic university. In student-led movements, they fought for the new kinds of public the university needed to serve—women, minorities, immigrants, indigenous people, and more—with a success that had a profound impact on the intellectual landscape of the twentieth century. Because of their efforts, ethnic studies, women’s studies, and American studies were born, and minority communities have become more visible and important to academic debate. Less than fifty years since this pivotal shift in the academy, however, the university is fighting back. In *We Demand*, Roderick A. Ferguson shows how the university, particularly the public university, is moving away from “the people” in all their diversity. As more resources are put toward STEM education, humanities and interdisciplinary programs are being cut and shuttered. This has had a devastating effect on the pursuit of knowledge, and on interdisciplinary programs born from the hard work and effort of an earlier generation. This is not only a reactionary move against the social advances since the ‘60s and ‘70s, but part of the larger threat of anti-intellectualism in the United States.
