psychology textbooks harvard: The Harvard List of Books in Psychology Harvard University, 1971 The Harvard List of Books in Psychology was first compiled in the 1930s, when

each student in the department enjoyed the luxury of an individual tutorial. Together tutor and student could map out a course of reading. By 1938, the list had proved so useful that its 349 titles were annotated and printed, though mainly for local consumption. Growth of an outside demand from students, librarians, and the reading public led to a supplement in 1944 and a number of successive editions bearing the present title. The present edition updates the List without expanding it beyond useful size: for each new title the compilers have faithfully tried to delete one, and new entries account for almost half of the present total of 744. Each title is annotated with descriptive and evaluative material.

psychology textbooks harvard: Harvard's Quixotic Pursuit of a New Science Patrick L. Schmidt, 2022-06-21 In Harvard's Quixotic Pursuit of a New Science, Patrick L. Schmidt tells the little-known story of how some of the most renowned social scientists of the twentieth century struggled to elevate their emerging disciplines of cultural anthropology, sociology, and social and clinical psychology. Scorned and marginalized in their respective departments in the 1930s for pursuing the controversial theories of Freud and Jung, they persuaded Harvard to establish a new department, promising to create an interdisciplinary science that would surpass in importance Harvard's "big three" disciplines of economics, government, and history. Although the Department of Social Relations failed to achieve this audacious goal, it nonetheless attracted an outstanding faculty, produced important scholarly work, and trained many notable graduates. At times, it was a wild ride. Some faculty became notorious for their questionable research: Timothy Leary and Richard Alpert (reborn as Ram Dass) gave the psychedelic drug psilocybin to students, while Henry Murray traumatized undergraduate Theodore Kaczynski (later the Unabomber) in a three-year-long experiment. Central to the story is the obsessive guest of legendary sociologist Talcott Parsons for a single theory unifying the social sciences- the white whale to his Captain Ahab. All in all, Schmidt's lively narrative is an instructive tale of academic infighting, hubris, and scandal.
