textbooks ssc: Open Development Matthew L. Smith, Katherine M. A. Reilly, 2014-01-10
Experts explore current theory and practice in the application of digitally enabled open networked social models to international development. The emergence of open networked models made possible by digital technology has the potential to transform international development. Open network structures allow people to come together to share information, organize, and collaborate. Open development harnesses this power, to create new organizational forms and improve people's lives; it is not only an agenda for research and practice but also a statement about how to approach international development. In this volume, experts explore a variety of applications of openness, addressing challenges as well as opportunities. Open development requires new theoretical tools that focus on real world problems, consider a variety of solutions, and recognize the complexity of local contexts. After exploring the new theoretical terrain, the book describes a range of cases in which open models address such specific development issues as biotechnology research, improving education, and access to scholarly publications. Contributors then examine tensions between open models and existing structures, including struggles over privacy, intellectual property, and implementation. Finally, contributors offer broader conceptual perspectives, considering processes of social construction, knowledge management, and the role of individual intent in the development and outcomes of social models. Contributors Carla Bonina, Ineke Buskens, Leslie Chan, Abdallah Daar, Jeremy de Beer, Mark Graham, Eve Gray, Anita Gurumurthy, Havard Haarstad, Blane Harvey, Myra Khan, Melissa Loudon, Aaron K. textbooks ssc: Digital Hinduism Murali Balaji, 2017-11-01 This edited volume seeks to build a scholarly discourse about how Hinduism is being defined, reformed, and rearticulated in the digital era and how these changes are impacting the way Hindus view their own religious identities. It seeks to interrogate how digital Hinduism has been shaped in response to the dominant framing of the religion, which has often relied on postcolonial narratives devoid of context and an overemphasis on the geopolitics of the Indian subcontinent post-partition. From this perspective, this volume challenges previous frameworks of how Hinduism has been studied, particularly in the West, where Marxist and Orientalist approaches are often ill-fitting paradigms to understanding Hinduism. This volume engages with and critiques some of these approaches while also enriching existing models of research within media studies, ethnography, cultural studies, and religion.
