textbooks unl: Textbooks in Academic Libraries Chris Diaz, 2018-12-03 Shortly after the syllabi are posted, and long before the beginning of the term, interlibrary loan departments at academic libraries will have filled or rejected innumerable textbook requests. While it would be unwise if not impossible to buy and circulate every textbook at a college or university, there are many academic libraries who are selectively adding textbooks to their collections. And the practice seems to be gaining momentum. In this volume, the Association for Library Collections and Technical Services (ALCTS) and editor Chris Diaz gather case studies that pull together creative approaches and best practices for print textbook reserve programs. This book discusses such topics as results and analysis from a detailed survey of a state university's core-course textbook reserve program; funding sources for starting or piloting a program; using aggregated enrollment, grade, and textbook cost data to identify high impact courses; identifying course-related books that are in the library's collection or fit an existing collection policy; workflow for using bookstore data with ILS and purchasing systems; and using LibGuides and Google Sheets to publicize textbook holdings, and how a back-end database supports discovery for students and reporting for reserves staff. A textbook reserve program can be one way of helping students who are struggling with the high cost of textbooks, and this book spotlights a variety of examples that can be used as models.

Greco, 2023-05-17 This book explores the college textbook publishing industry, from its inception in medieval universities, through the late 20th century, to the present day which has led to an existential crisis for some publishers. The various sections in this book offers a comprehensive analysis of the substantive developments, problems, and concerns about a myriad of major issues that confronted the higher education textbook sector after 2000. Chapters incorporate highly reliable textbook statistical sources as well as a review of some marketing theories utilized by these publishers (e.g., understanding the threat of substitute products; the sale of used and rental texts; the sale of new digital textbooks).

textbooks unl: Academic Libraries and Public Engagement With Science and Technology Eileen Harrington, 2019-03-28 Libraries have historically played a role as a community builder, providing resources and spaces where knowledge can be archived, shared and created. They can also play a pivotal role in fostering the public's understanding of science and scientific processes. From makerspaces to data visualization labs to exhibits, many libraries already delve into scientific explorations and many more could join them. Scientists often need to include broader impacts goals in grant proposals, but they might not know where to begin or feel that they do not have the time to devote to public engagement. This is where libraries and librarians can help. Research in science communication also supports tapping into libraries for public engagement with science. Studies

show that it is important for scientists to present findings in an apolitical way-not aligning with one solution or one way of thinking and not being seen as an activist (Druckman, 2015; Jamieson & Hardy, 2014). One of the core tenets of librarians and libraries is to present information in a neutral way. Research also shows that Informal conversations about science can have a greater effect on people than reading about it online or hearing about it on the news (Eveland & Cooper, 2013). Again, libraries can play a role in fostering these types of conversations. Given this landscape, this book will demonstrate concrete ways that libraries and librarians can play a role in fostering public engagement with science. In addition to background information on the current landscape of public knowledge and understanding of science, it will also include best practices and case studies of different types of programming and services that libraries can offer. Often libraries do not jump to mind when people think about science education or science literacy, and many librarians do not come from a science background. Literature on science programming and sharing science is largely absent from the library field. This book will help give confidence to librarians that they can participate in engaging the public with science. At the same time, it will provide a conduit to bring informal science educators, communication officers from universities or research organizations who share scientific discoveries with the public, and librarians together to explore ways to align their work to promote scientific literacy for all.

textbooks unl: *Patron-Driven Acquisitions* Judith Nixon, Robert Freeman, Suzanne Ward, 2014-01-02 For over a decade, some academic libraries have been purchasing, rather than borrowing, recently published books requested by their patrons through interlibrary loan. These books had one circulation guaranteed and so appealed to librarians who were concerned about the large percentage of books selected and purchased by librarians but never checked out by their patrons. Early assessments of the projects indicated that patrons selected quality books that in many cases were cross disciplinary and covered emerging areas of scholarly interest. However, now we have a significant database of the ILL purchase records to compare these titles with books selected through normal methods. The projects described in this book present a powerful argument for involving patrons in the book selection process. This book looks at patron-driven acquisitions for printed books at Purdue University, the University of Nebraska-Lincoln and the University of Illinois, as well as exploring new programs that allow patrons to select e-books or participate in other innovative ways in building the library collections. This book was published as a special issue of Collection Management.

textbooks unl: Economic Rights in Canada and the United States Rhoda E.

Howard-Hassmann, Claude E. Welch, Jr., 2011-06-03 Readers in Western developed countries are most familiar with abuses of political and civil rights, but the international human rights regime also embraces a set of laws regarding economic rights. These rights include the right to work and to just and favorable working conditions; the right to join and form trade unions; the right to social security; specific rights for the family; the right to an adequate standard of living, including food, clothing, housing, and the continuous improvement of living conditions; and the right to the highest attainable standard of physical and mental health. In original essays by scholars senior and junior, this volume explains how these rights are realized—or violated—in Canada and the United States. Contributors analyze the philosophy, law, and politics of economic rights and discuss specific issues such as poverty, health care, and the rights of people with disabilities. Central to the problems of both countries are the human rights abuses evident in all contemporary capitalist societies. When the inequalities among citizens are not cushioned by a national commitment to economic rights, or when governments fail to maintain social safety nets for all citizens, economic rights are at risk. Contributors consider the problem from the perspective of their own countries: Canada, the United States, and, for contrast, the Netherlands. They do so in order to explore whether their own countries fall short of meeting international standards of economic rights. They also address the criticism often made by non-Western scholars of human rights—that their Western colleagues preach human rights abroad without regard to the human rights flaws at home.
