bridge the gap workbooks: First Corinthians - Women's Bible Study Participant Book Melissa Spoelstra, 2016-08-02 Relationships are messy. We're all different and imperfect, and we can struggle to get along--especially with those who disagree with us. Often we find ourselves divided--even as Christians. How can we work out our differences and disagreements with humility and grace, always showing the love of Christ, while still remaining true to what we believe? The Apostle Paul wrote to the Christians living in Corinth about this very thing. The cultural backdrop of Corinth was even more overtly sinful than our culture today, yet Paul boldly encouraged the Corinthian Christians not to ridicule one another or outsiders but to work together to show the love of Christ. In this six-week study we will explore Paul's first letter to the Corinthians to learn how we as Christians are to deal with differences and divisions--whether in the workplace, neighborhood, school, home, social media community, or church. We'll discover that the answer is living and sharing the radical love of Jesus Christ, and we'll unpack what this means and how we can live it out day by day. The Participant Book includes five days of lessons for each week, combining study of Scripture with personal reflection, application, and prayer. Other components for the Bible study, available separately, include a Leader Guide, DVD with six 25-30 minute sessions, and boxed Leader Kit (an all-inclusive box containing one copy of each of the Bible study's components).

bridge the gap workbooks: *Basic Math Concepts* Joanne K. Price, 2018-05-03 FROM THE PREFACE In the years since the first edition, I have continued to consider ways in which the texts could be improved. In this regard, I researched several topics including how people learn (learning styles, etc.), how the brain functions in storing and retrieving information, and the fundamentals of memory systems. Many of the changes incorporated in this second edition are a result of this research. The changes were field-tested during a three-year period in which I taught a water and wastewater mathematics course for Palomar Community College, San Marcos, California. All the fundamental math concepts and skills needed for daily water/wastewater treatment plant operations.
