rewards student workbooks: Classroom Management Robert T. Tauber, 2007-08-30 Educators need a balance between discipline theory and its practice in the classroom. This is especially important in today's educational climate, with its increased demands for teacher accountability. Tauber has designed this book for both those who are new to teaching and those who are already seasoned teachers but who have had little, if any, coursework in discipline. This book

presents several sound frameworks that readers can use to evaluate six tried-and-true discipline models. Teachers need to select, learn, and implement a discipline model that best reflects how they feel students should be treated. Tauber explores a number of topics, some controversial, all quite relevant, concerning how teachers can prevent, as well as handle, problem behaviors. A chapter describing A through Z discipline suggestions can be immediately put into use.

rewards student workbooks: Effective Teaching in Correctional Settings Robert G. Thomas, Robert Murray Thomas, 2008 This book has a dual purpose: to identify problems faced by people who teach in correctional institutions and to propose solutions for those problems. The intent of this book is to help both new instructors as well as current ones perform their jobs effectively. The book is divided into three parts. The first part introduces the reader to the field of correctional education, describing correctional efforts in America, the kinds of facilities, the inmate populations, and the controversies, including advocates and critics, over providing educational opportunities. A description is provided on the kinds of educational and rehabilitation programs, including the varieties and sources of teachers and administrators. Part two explores the teaching process and how students are analyzed on their abilities, learning disorders, gender, ethnicity, gang membership, length of imprisonment, and reasons for enrolling in educational programs. Each chapter is divided into two major sections: the first section studies the perspective and the second section concerns problems and solutions. Each problem is posed as a brief case study that includes the nature of a particular problem, factors affecting decisions about what a teacher might do, and one or more proposed solutions. Part three summarizes key concepts from the previous chapters and speculates about the state of correctional education in the years ahead. It will be of interest to those who contemplate a career in correctional education, those who are already in correctional education, or those who simply want to learn what teaching in a prison, jail, or juvenile facility is all about.

rewards student workbooks: Self-instruction Pedagogy Dennis E. Mithaug, Deidre K. Mithaug, 2007 This book describes a method of teaching that fosters autonomous learning in all students, including students with disabilities. The pedagogy is based on decades of research on

strategy instruction as well as on a theory of learning that claims these four conditions promote self-determined learning in all learners: (1) opportunities to choose expectations for gaining something from a learning challenge, (2) strategies that regulate responses to meet those expectations, (3) comparisons between results and expectations that provoke additional adjustment in expectations and responses, and (4) persistent engagement and adjustment until results match expectations. The pedagogy of self-instruction described in this book anchors these conditions in everyday instruction so students can learn by adjusting to their own expectations. Chapter 1 compares this approach to the teacher-directed methods of direct instruction that require teachers to set expectations for students, control how students respond to them, evaluate the outcomes they produce, and then prescribe adjustments students must make to improve. Chapter 2 provides evidence that too much of special education instruction reflects this teacher-directed approach and as a consequence discourages students from learning how to learn on their own. Chapters 3-6 identify four ways to shift learning control from teachers to students and Chapters 7 and 8 identify the obstacles to achieving this instructional shift in special education. The appendices of the book provide a bibliography of research on self-instruction and direct instruction pedagogies and a validated self-assessment that can evaluate the directedness of your teaching.
